

IN THE CLAIMS

Cancel Claim 1-8 and 10-15, without prejudice.

1. (Cancelled)

16. (Original) A method by which photographic images taken by and stored in a digital camera are downloaded to a computer at which the photographic images are located for viewing, said method comprising the steps of:

annotating said photographic images by assigning markers to identify different sets of said images according to a subject associated with the photographic images taken by the camera;

copying the photographic images taken by the camera into high resolution images and low resolution images;

transferring said high resolution images to a high resolution storage folder for processing;

creating subtopic folders in the computer corresponding to events associated with the photographic images taken by the camera;

downloading said low resolution images to image folders of the computer;

assigning labels to each of the different sets of low resolution images corresponding to the markers assigned thereto and locating the different sets of low resolution images in respective image folders according to said labels;

merging said image folders with said subtopic folders and transferring said image and subtopic folders to a computer server folder;

accessing, viewing and placing an order for a particular set of low resolution images in a particular one of the image folders located at said computer server folder; and

filling the order for the set of low resolution images from the high resolution images at said high resolution storage folder.

17. (Original) The method recited in Claim 16, wherein said digital camera includes a mass media storage device adapted to store sound data and the photographic images taken by the camera, said method comprising the additional step of annotating said photographic images by means of sound markers spoken into and stored in the mass media storage device.

18. (Original) The method recited in Claim 16, wherein said digital camera includes a mass media storage device adapted to store the photographic images taken by the camera, said method comprising the additional step of annotating the photographic images by means of flat image markers shot by the camera and stored by the mass media storage device.

19. (Original) The method recited in Claim 16, wherein said digital camera includes a mass media storage device adapted to store the photographic images taken by the camera, said method comprising the additional step of annotating said photographic images by means of locked image markers stored by the mass media storage device.

20. (Original) The method recited in Claim 16, including the additional steps of displaying an order form by which to enable said order to be placed for the particular set of low resolution images in the particular one of the image folders, and initiating a timer by which to limit the time available during which to complete the order form.
